CREATING A VUE PROJECT

The Good Old' `vue init`

- Lots of incompatible templates
- Scaffolding only
- Eject only
- Difficult upgrades

VUE CLI 3

Goals of CLI v3

- Reduce configuration fatigue
- Incorporate best practices
- Configurable and extensible

Install it now!

- `yarn global remove vue-cli`
- `yarn global add @vue/cli`

Getting Started

- `vue create my-app`
- `cd ./my-app`
- `yarn serve`
- `yarn build`

Built-in features

Jest Webpack 4
PWA Sass Typescript
Modern mode Cypress
Web components Less
Babel 7 Mocha
Linting Multi-page
Stylus
Nightwatch

Compatible while Futureproof

- Browserslist
- Web Components
- Modern Mode

Easy of Use

- Works out of the box
- Graphical User Interface (beta)

LESSONS WE LEARNED

Responsibilities of a CLI

- Scaffolding
- Local Development
- Front-end Bundling

What's so hard about CLI

Each extra dependency doubles the complexity

Zero Configuration

- Why?
- The Rise of Parcel
- Zero Config = Better Default Configs = Best Practices

Best Practices

6

7

8

Front-End Performance Checklist 2018

Below you'll find an overview of the **front-end performance issues** you might need to consider to ensure that your response times are fast and smooth.

Get Ready: Planning and Metrics

☐ Establish a performance culture.

As long as there is no alignment between teams, performance isn't going to sustain long-term. Study common complaints coming into customer service and see how improving performance can help relieve some of these problems. Build up a company-tailored case study with real data. Plan out a loading sequence and trade-offs during the design process.

☐ Choose the right metrics.

Not every ¹metric is equally important. Study what metrics matter most: usually it will be related to how fast you can start render *most important* pixels and how quickly you can provide input responsiveness. Prioritize page loading as perceived by your customers. Time to Interactive, Hero Rendering Times, First Meaningful Paint, Speed Index usually matter.

Opinionated Choices

- ESLint Config: Standard / Prettier / Airbnb
- Test Frameworks: Mocha / Jest / ...

Plugin-based Design

- Tackle one problem at a time
- Opt-in
- Good for contributing

Core Plugins

- Transpiler: None / Babel / TypeScript / TypeScript + Babel
- PWA: workbox
- ESLint: Airbnb / Standard / Prettier / TSLint
- Unit Tests: vue-test-utils + Jest / Mocha
- E2E Tests: Cypress / Nightwatch

Custom Config

Why?

- There's no one-size-fits-all solution
- Community-driven researches

Custom Config: The Past

- Fork (vue-cli v2)
- Eject (creat-react-app)
- Partial modification on wrapped options (angular-cli < 6)
- Merge options (@angular-builders/custom-webpack)

Custom Config: Better Choice

- Limited Expressiveness of Plain Object
- Grunt => Gulp, .rc => .config.js
- Configuration DSL
- Functional Interface

chainWebpack

```
const path = require("path");

module.exports = {
  chainWebpack: config => {
    config.plugins.delete('prefetch')

    config.resolve.alias
      .set('vue$', 'vue/dist/vue.esm.js')

    // add plugin
    config
      .plugin('CompressionPlugin')
      .use(CompressionPlugin)

    config.plugin('html')
      .tap(args => {
        args[0].filename = path.resolve('../backend/templates/index.html');
        return args;
      });
  },
}
```

CLI Project Organization

- What's wrong with distributed repositories?
 - Discoverability
 - Cross module refactoring
- Monorepo for the win!

Versioning

Versioning is HARD

- React 0.14 => 15.0
- Angular 2.4 => 4.0
- Angular CLI 1.7 => 6.0

Versioning in a Monorepo

- lerna
- force-publish? 
- fixed? 
- independent? 

Versioning of Vue CLI

- Keep plugin minors in sync
- Patch on demand
- Separate config-related packages

Reporting Issues

- vue info
- Coming in v3.2

```
1. soda@mbp: ~/Test/my-app (zsh)
→ my-app git:(master) vue info

Environment Info:

System:
  OS: macOS 10.14.1
  CPU: (8) x64 Intel(R) Core(TM) i7-6820HQ CPU @ 2.70GHz
Binaries:
  Node: 10.12.0 - ~/n/bin/node
  Yarn: 1.12.3 - /usr/local/bin/yarn
  npm: 6.4.1 - ~/n/bin/npm
Browsers:
  Chrome: 70.0.3538.110
  Firefox: 63.0.1
  Safari: 12.0.1
npmPackages:
  @vue/babel-preset-app: 3.1.1
  @vue/cli-overlay: 3.1.0
  @vue/cli-plugin-babel: ^3.1.1 => 3.1.1
  @vue/cli-plugin-eslint: ^3.1.5 => 3.1.5
  @vue/cli-service: ^3.1.4 => 3.1.4
  @vue/cli-shared-utils: 3.1.1
  @vue/component-compiler-utils: 2.3.0
  @vue/preload-webpack-plugin: 1.1.0
  @vue/web-component-wrapper: 1.2.0
  babel-helper-vue-jsx-merge-props: 2.0.3
  babel-plugin-transform-vue-jsx: 4.0.1
  eslint-plugin-vue: ^5.0.0-0 => 5.0.0-beta.4
  vue: ^2.5.17 => 2.5.17
  vue-eslint-parser: 3.2.2
  vue-hot-reload-api: 2.3.1
  vue-loader: 15.4.2
  vue-style-loader: 4.1.2
  vue-template-compiler: ^2.5.17 => 2.5.17
  vue-template-es2015-compiler: 1.6.0
npmGlobalPackages:
  @vue/cli: Not Found
```

Upgradable

- Why?
- How?
- **Locality is the key**

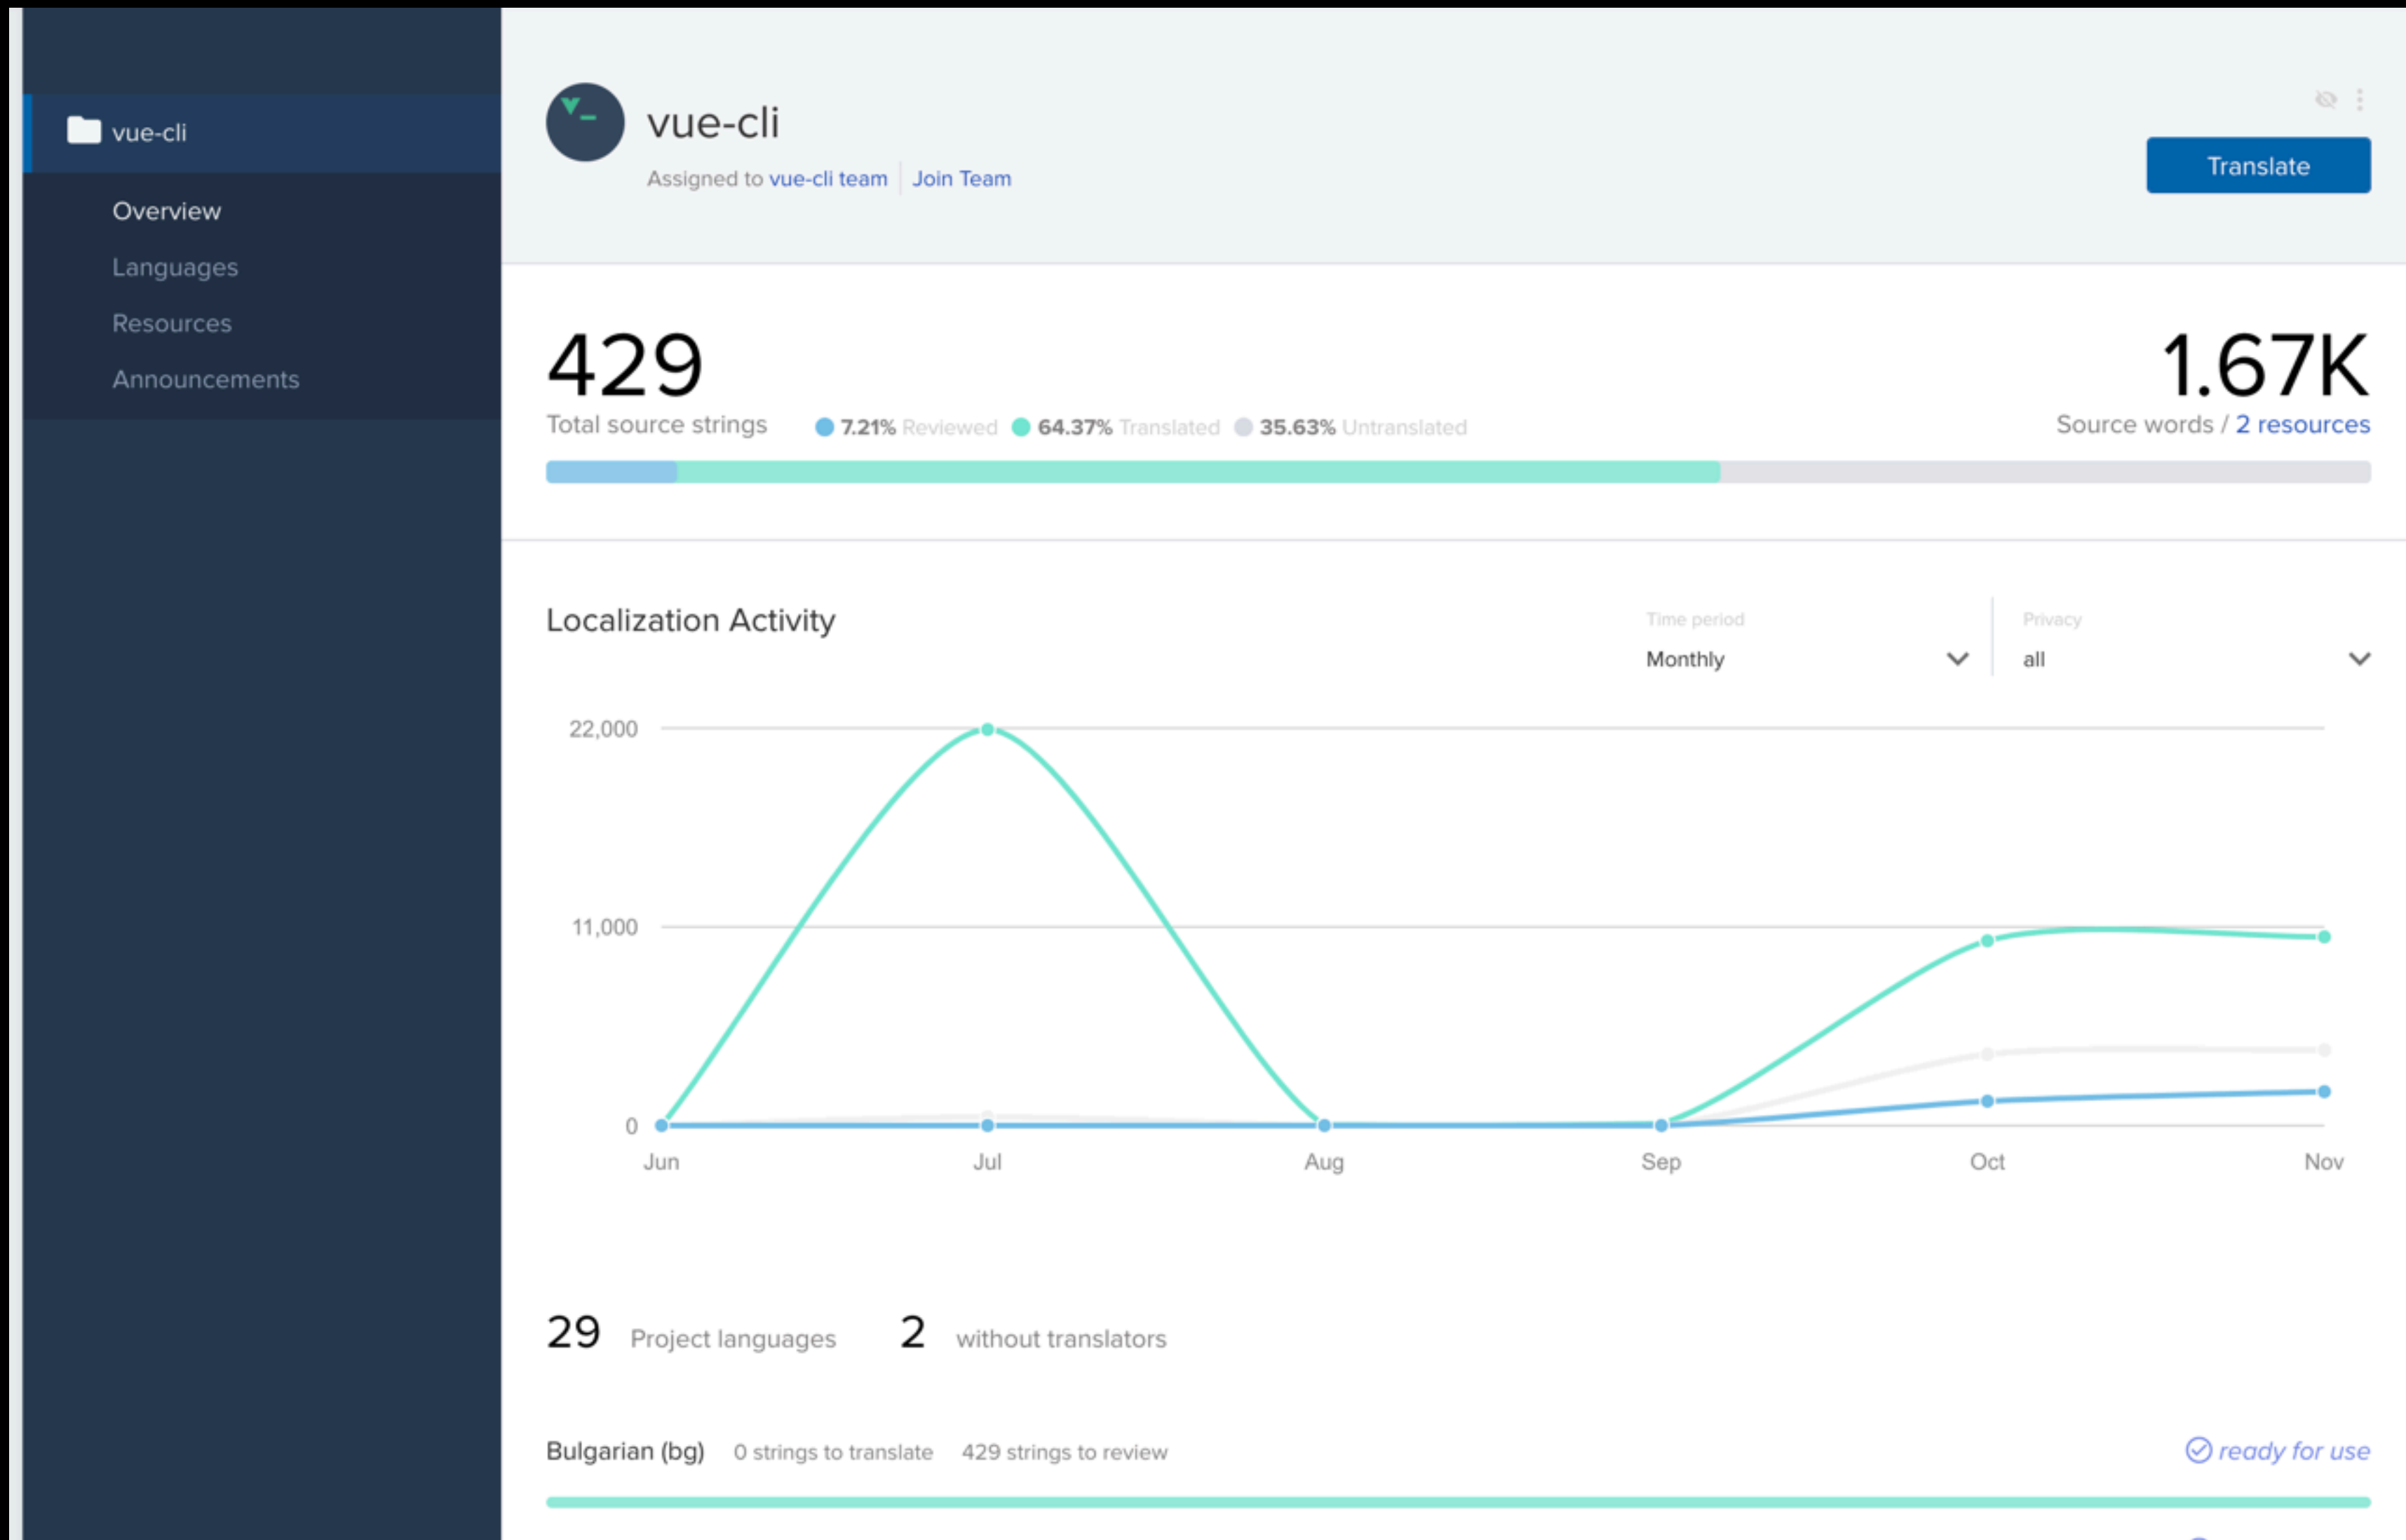

Upgradable

- Upgradable Plugin: Non-destructive User Configs
- Upgradable Dependencies: ~~require~~ `loadModule`
- Upgradable Template: Programmable Template Generator

Open Source i18n

- Centralized or not?
- Problems with centralization
- Problems with distributed

Transifex

Coming Next

- vue upgrade
- Better error overlay
- Better TypeScript support

JS vue.config.js vue-cli • packages/test/vue.config.js/🔗 <unknown>/📦 chainWebpack

```
1  /** @typedef {import('@vue/cli-service').ProjectOptions} ProjectOptions */
2
3  /** @type {ProjectOptions} */
4  module.exports = {
5    ··baseUrl: '/test',
6    ··chainWebpack: config => {
7      ···config.
8    ··}
9  }
```
